Abstract

Within the ever dynamic market economy it is important for businesses to adapt to such a dynamic environment. It is even more important for managers to be provided with high quality information. Therefore it is of absolute necessity that informatic systems should be developed in order to provide such information. The development of such systems may be achieved with the help of some traditional methodologies or of some more rapid ones. The paper deals with the two types of methodologies presenting both their advantages and disadvantages.

Keywords: information system, methodology, business process.
